OUR SOLUTION TAILED TO YOUR NEEDS

At InnoEnergy, sustainability is about more than lowering emissions. True sustainability also means an industry that’s commercially viable, free, pioneering new technologies that reduce energy costs, increase system performance, decrease greenhouse gas (GHG) emissions, create jobs, and increase competitiveness. We make this possible by supporting sustainable energy innovations which provide industry with risk mitigation and knowledge on sustainable energy sectors.

TAILORED TO YOUR NEEDS

Are you an entrepreneur who wants to have a global impact in a sustainable world? Find out how we will strengthen your foundations, fuel your ambitions and impact in a sustainable world.

EIT HUB NETWORK

Our main goal in Central and Eastern Europe is to build a sustainable structure of partnerships, aiming to increase the innovation capacity within the region. To achieve this we have built a Hub network with trusted Partners, who run our local operational units as EIT InnoEnergy Hubs.

InnoEnergy Hubs are supported by the InnoEnergy Power Alliance – an initiative funded through the European Institute of Innovation and Technology Regional Innovation Scheme (EIT RIS), which is a framework developed to increase the innovation capacity in regions in Europe not directly benefitting from the EIT or InnoEnergy activities.

InnoEnergy Hubs are supported on an annual fee basis and are required to have a dedicated team within the country to operate the Hub. Each Hub has a specific governance structure, agreed jointly with the local partner. InnoEnergy provides operational guidance, best practice, and access to a network of experts.

EIT PowerUp!

Every year PowerUp! has at least 13 Country Finals which are being co-organized by InnoEnergy Hubs. Thanks to the network, young entrepreneurs from Central & Eastern Europe get a chance to work with the best European mentors and business coaches. Big value of this challenge is education and business mentoring.

PowerUp! is open to startups, scaleups and SMEs from the Central and Eastern European region. The best entrepreneurs will be invited to InnoEnergy programmes with investment up to €5.000.000 and support.

INNOENERGY HUB TURKEY

Sabanci University, Siberia CleanTech Accelerator

As an Innovation Hub, Sabanci University, Siberia CleanTech Accelerator provides a platform for entrepreneurs who want to enter the market, develop business opportunities, and achieve success.

INNOVATION & TECHNOLOGY REGIONAL INNOVATION SCHEME (EIT RIS)

The EIT Regional Innovation Scheme (EIT RIS) is designed for EU Member States and Horizon 2020 Associated States. Its overall objective is to increase the innovation capacity within regions in Europe not directly benefitting from the EIT or InnoEnergy activities.

The EIT RIS Scheme promotes local innovation ecosystems, in support of entrepreneurs and businesses who can drive economic growth in their regions.

This scheme is implemented in close cooperation with national authorities, economic development organizations, universities, and other stakeholders. It provides a framework for supporting local innovation ecosystems, in support of entrepreneurs and businesses who can drive economic growth in their regions.

The EIT RIS Scheme is implemented through a network of Innovation Hubs, which are supported by the EIT Power Alliance. These Hubs are located in regions that benefit from the EIT or InnoEnergy activities.
